

RIFT-SAWN CUT

- Ideal for custom homes (*including custom furniture*)
- The Most dimensionally stable cut of lumber available
- Unique, linear appearance on both sides of the lumber planks.

Rift sawn wood is very dimensionally stable and has unique linear appearance. Rift Sawn lumber is typically narrow with a very straight grain pattern on the face of the board. Rift Sawn lumber milling is more labor intensive than both plain and quarter sawn lumber. Due to its unique cut it produces more waste per log. Rift sawn lumber is more expensive than quarter sawn wood due to the amount of labor involved in cutting each individual plank.
